

Structural Collection finds its inspiration in nature, abstracting its motives to a minimal level of existence without losing the recognition of their meaning and context. It includes items made of highest quality merino wool felt in 7 vivid colors, transformed into rich textures and luxurious textile fabrication. The formal elements of waves, wings and dumplings are hand sewn, spread in strict mathematical order evenly over the surfaces. They create a sense of movement, both physical and spatial while the structure causes a shadow play that makes a monochromatic textile feel it has a multitude of hues.

From low stools in different dimensions which are the highlight of the collection, over various cushions, to wall installations this is the most recognizable and the most awarded collection of the brand Data by Despot. It is an imprint of Sjetlana's everyday life. Sitting on her balcony and drinking coffee while seagulls are flying and yelling at each other, enjoying the sight and smell of the Adriatic Sea right under her balcony or listening to the waves breaking into the rocks announcing the upcoming storm. And of course, the food, the inevitable love and passion of every Mediterranean woman.

All those moments are transformed into perfect artistic and functional delights, suitable for any small flat but also for big interiors. Wall installations are also applicable aesthetic details for any interior. Simply adding or even combining them in different colors, can indeed create a unique statement of the owner, but they also provide great sound and thermal insulation.

Structural Collection includes subcollections:

- Wawe,
- Wings
- Gnochi
- Knot
